

Executive Summary

Overview

This report presents a comprehensive analysis of 1,464 Amazon products covering ratings, reviews, pricing and discount patterns across multiple product categories. The dataset captures product performance metrics including actual prices, discounted prices, customer ratings and review counts. The goal is to identify key patterns that drive customer satisfaction and product popularity on Amazon.

Key Findings

Top Performing Products

The highest rated products on Amazon share a perfect score of 5.00 — led by the Syncwire LTG to USB Cable, Amazon Basics Wireless Mouse and REDTECH USB-C to Lightning Cable. These are all simple reliable accessories confirming that practical everyday products consistently achieve the highest customer satisfaction. Products rated 4.80 include kitchen and home appliances showing strong performance across multiple categories.

Price vs Rating Analysis

Price does not significantly affect customer satisfaction. All price ranges score between 4.07 and 4.18 showing customers are equally satisfied regardless of spending level. Luxury products score the highest at 4.18 despite having the largest gap between actual price (₹27,424) and discounted price (₹16,877) — a saving of ₹10,547 per product. This confirms that Amazon's discount strategy adds significant perceived value across all price segments.

Category Performance

Office Products leads all categories with the highest average rating of 4.31 followed by Toys and Games at 4.30. However, Electronics dominates by review volume with 15,778,848 total reviews — nearly double Computers and Accessories in second place at 7,728,689. Car and Motorbike is the weakest category with both the lowest rating of 3.80 and fewest reviews at 1,118.

Product Popularity

Amazon Basics HDMI Cables dominate user engagement occupying the top 2 positions with approximately 853,946 and 853,945 reviews respectively. Audio products — boAt Bassheads and JBL Headphones — also rank highly confirming strong customer interest in affordable electronics and audio accessories.

Discount Analysis

Amazon heavily uses discount pricing as a core strategy. 65% of all products offer discounts above 40% with the High discount range of 41-60% being the most common at 35% of products.

The average discount across all products is 47.71% and customers save an average of ₹2,321 per product confirming Amazon's positioning as a value for money platform.

Recommendations

1. Invest More in Office Products and Toys

Since Office Products and Toys have the highest ratings but relatively low review counts the company should increase marketing and visibility for these categories to drive more traffic and sales.

2. Improve Car and Motorbike Category

With the lowest rating of 3.80 and fewest reviews of 1,118 the Car and Motorbike category needs urgent attention. Amazon should review product quality, expand the catalog and use targeted promotions to grow engagement in this underperforming category.

Conclusion

The analysis confirms that Amazon maintains strong customer satisfaction with an average rating of 4.10 across 1,464 products. The platform's aggressive discount strategy averaging 47.71% drives significant customer value while Electronics dominates engagement. By improving underperforming categories and promoting high rated but low visibility products Amazon can significantly grow customer satisfaction and sales volume.
